

How to Import Salesforce Data into Notion

March 14, 2025

Looking for an easy way to **import Salesforce data to Notion**? Whether you need to track contacts, manage deals, or analyze customer insights, a **Notion Salesforce integration** can help streamline your workflow.

With **Note API Connector**, you can seamlessly connect Salesforce's API and import data into Notion—without coding. This guide will walk you through the process step by step, from generating a Salesforce credentials to setting up API requests that sync Salesforce data with Notion.

Quick start with Note API Connector

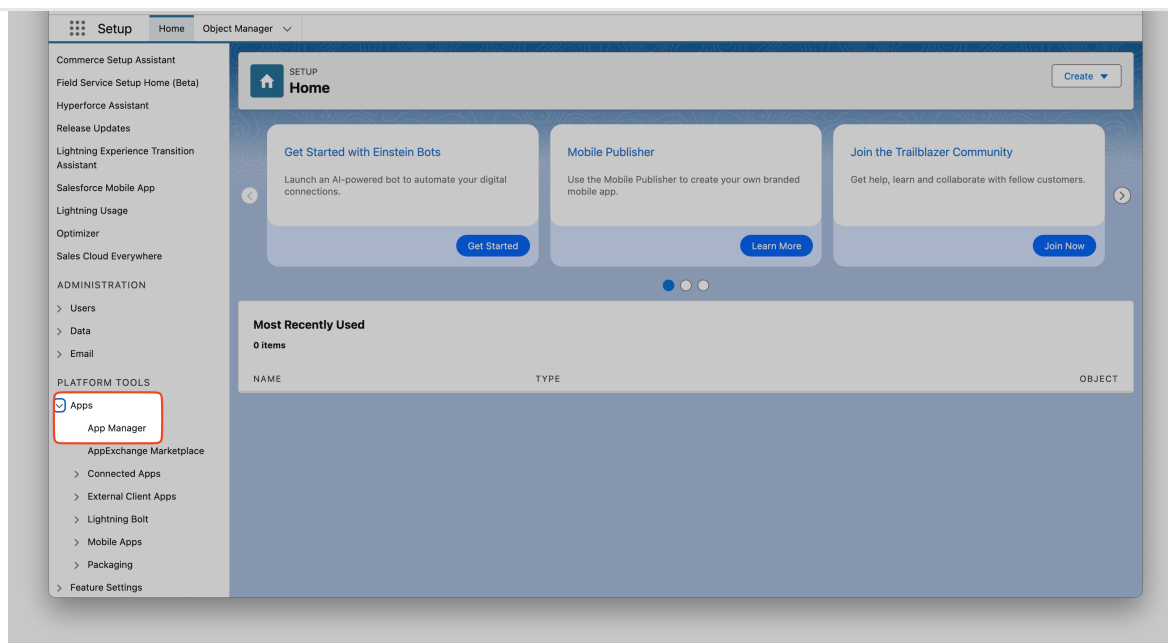

Start syncing your data to Notion in just a few clicks. Connect your Notion workspace, grant the necessary permissions, and you're ready to create powerful API-based automations, no coding required.

👉 Follow the [official setup guide](#) to get started in minutes.

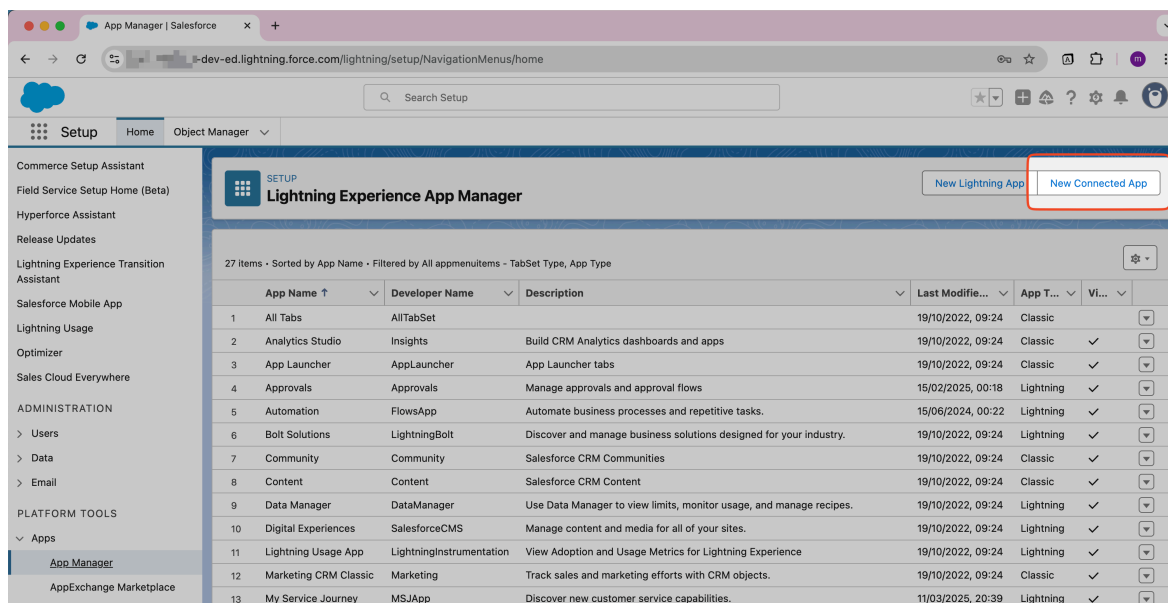

Generate Salesforce OAuth Credentials

To securely **import Salesforce data into Notion**, you must first create a **Connected App** in Salesforce and obtain an Client ID and Client Secret credentials.

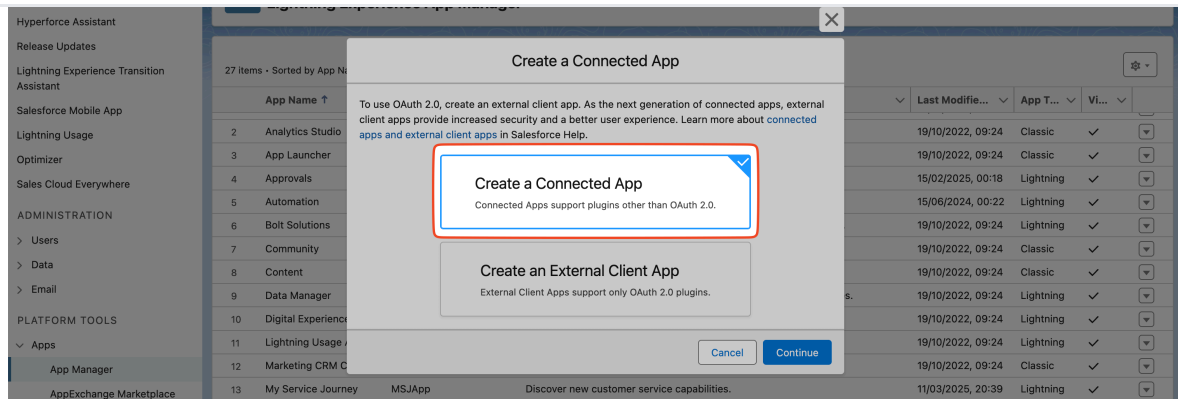

Log in to **Salesforce** and in left panel open **Apps** → **App Manager**.

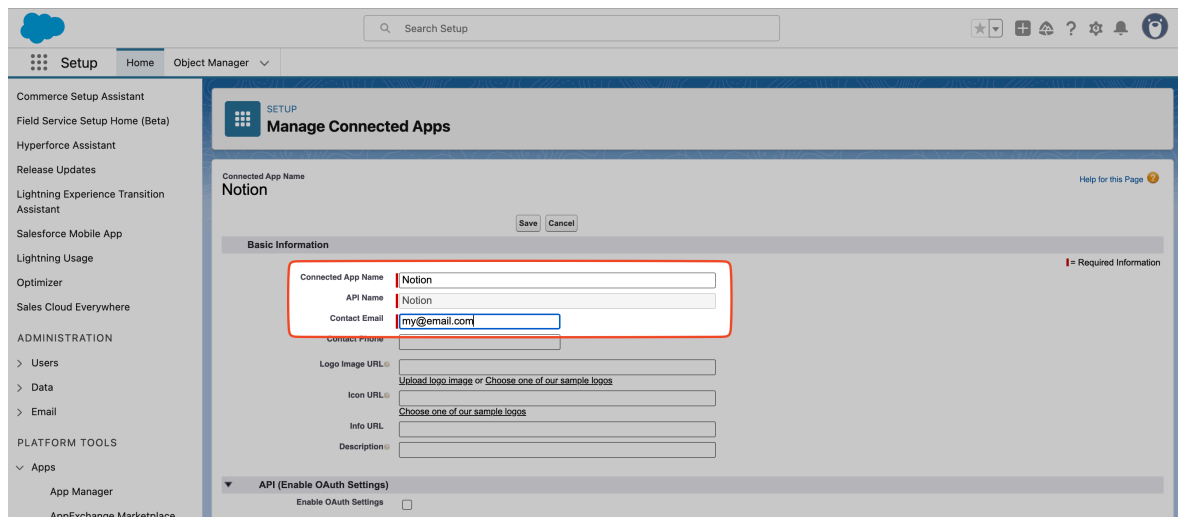

Click **New Connected App** .

Select **Create a Connected App** and confirm.

Name your app (for example, "Notion") and add your contact email.

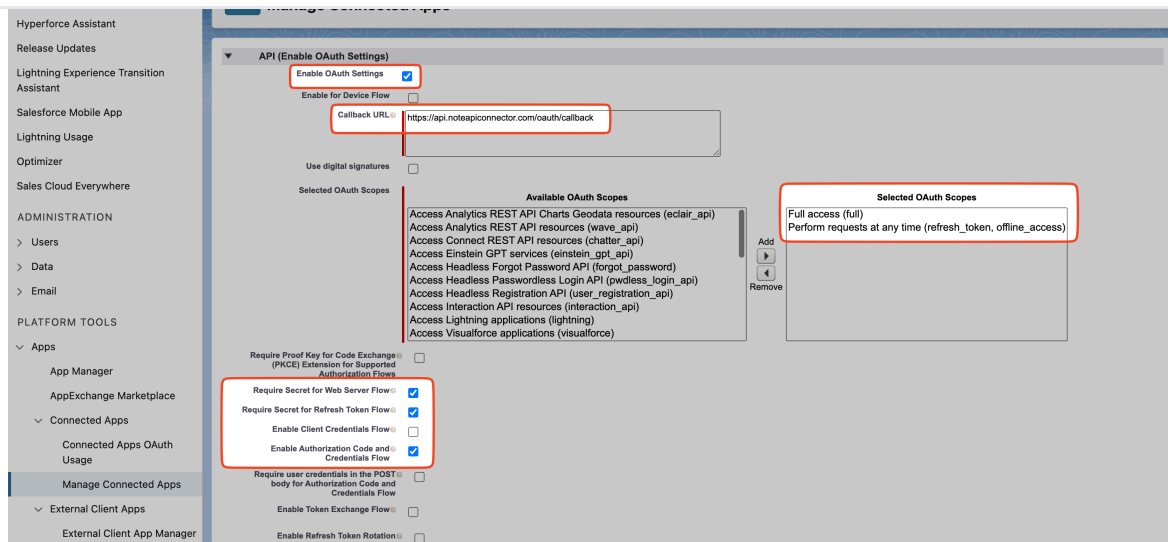

Now, scroll down and enable **Enable OAuth Settings** . Add

<https://api.noteapiconnector.com/oauth/callback> as **Callback URL** .

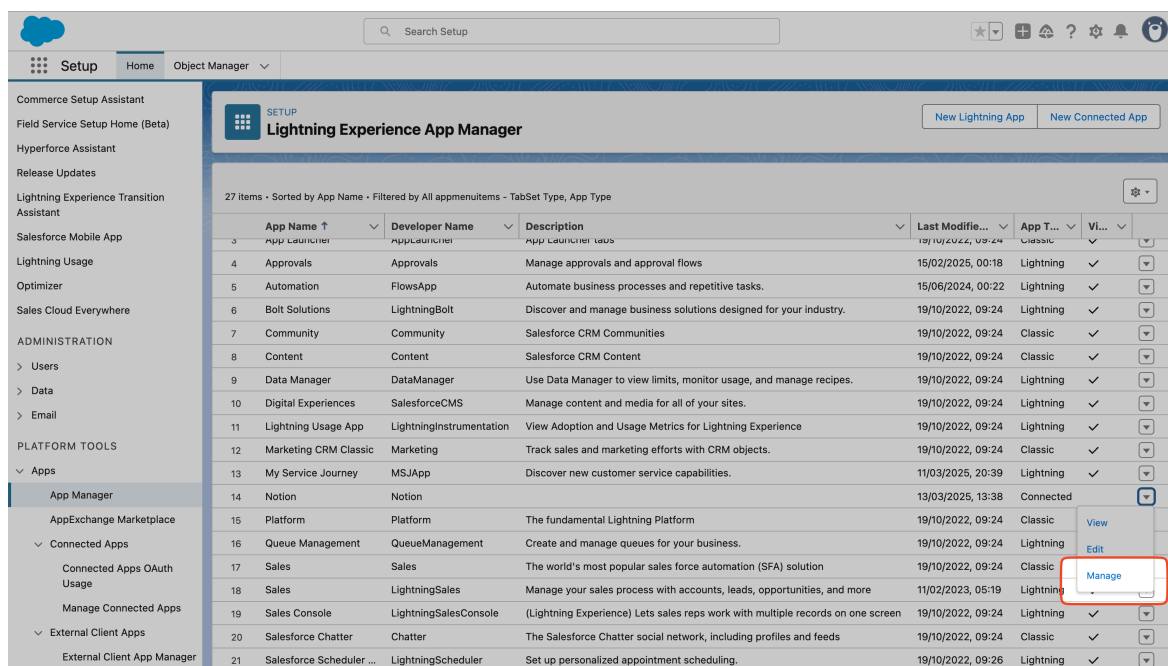

Add **Full access (full)** and **Perform requests at any time (refresh_token, offline_access)** into **Selected Auth Scopes** .

Enable:

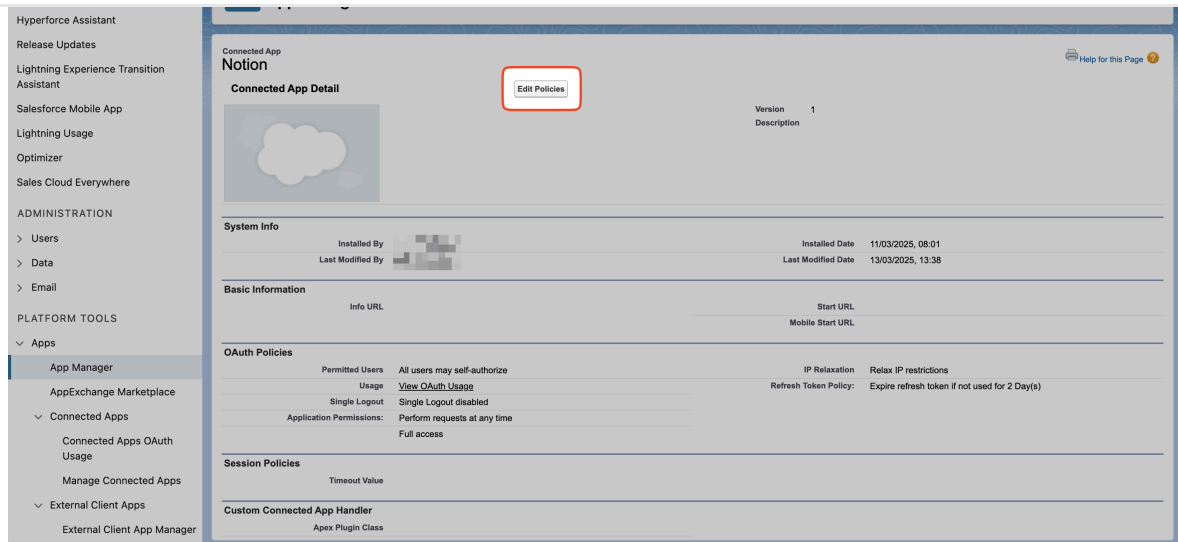

- Require Secret for Web Server Flow
- Require Secret for Refresh Token Flow
- Enable Authorization Code and Credentials Flow

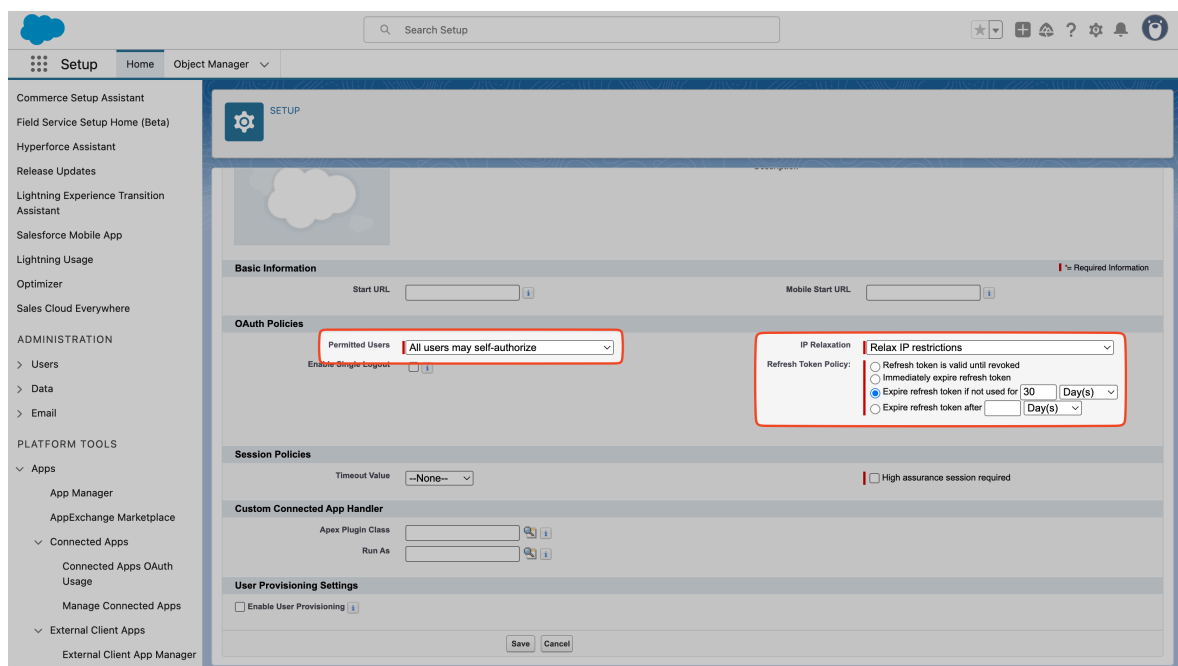

Go back to App Manager in Salesforce and click **Manage** for our created app.

Enter **Edit Policies** .

Select **All users may self-authorize** in **Permitted Users** and **Relax IP restrictions** in **IP Relaxation** . Change the value for **Expire refresh token if not used for** to **30** or whatever number. Then click **Save** .

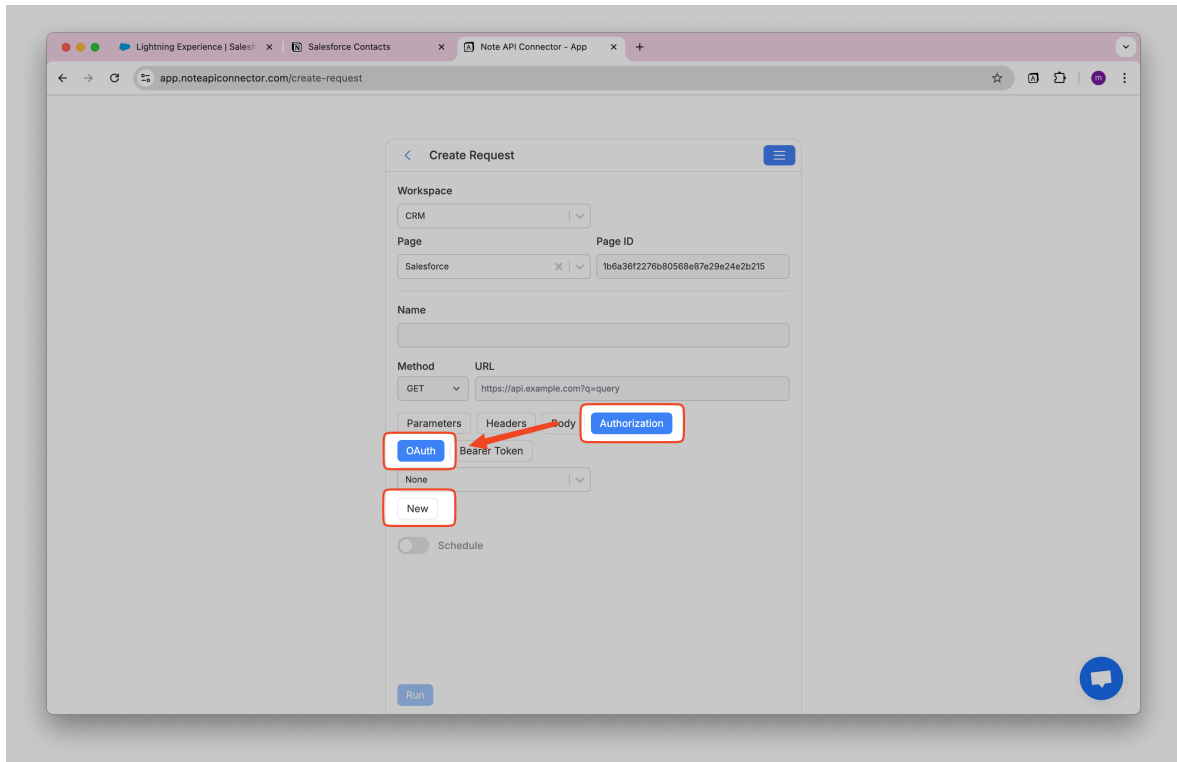

Import Salesforce Data into Notion

Before making API requests, review Salesforce's API documentation to see how it works: [Execute a SOQL Query](#).

You can import Salesforce data by running SOQL queries, where query is defined in url parameter such as:

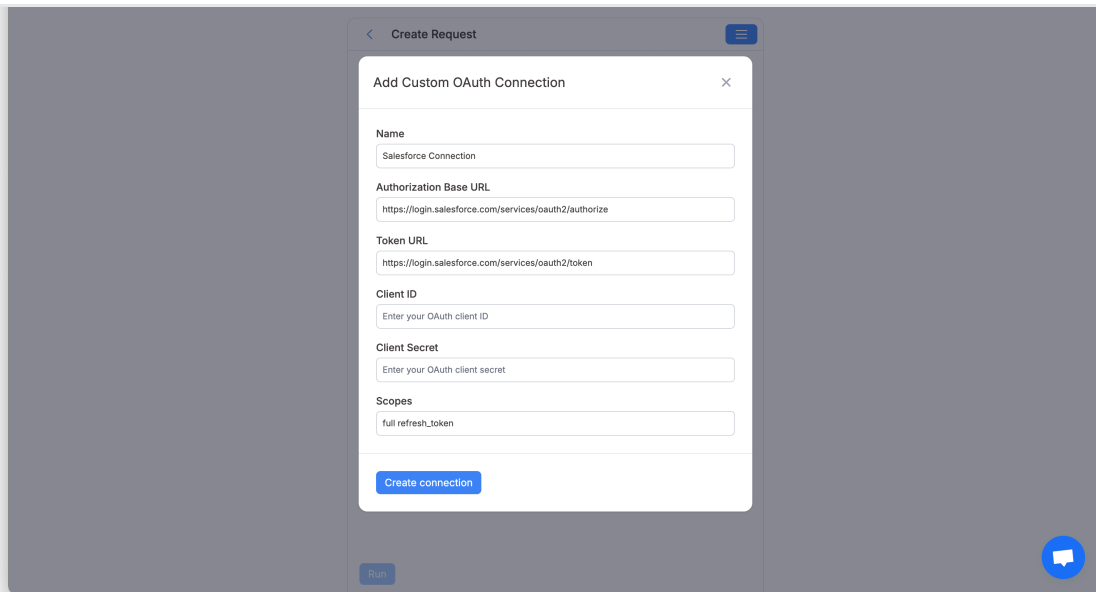

Connect Salesforce to Note API Connector

First, you need to create OAuth Connection between Salesforce and Note API Connector. Click [Create request](#) and select **Authorization** → **OAuth** → **New**.

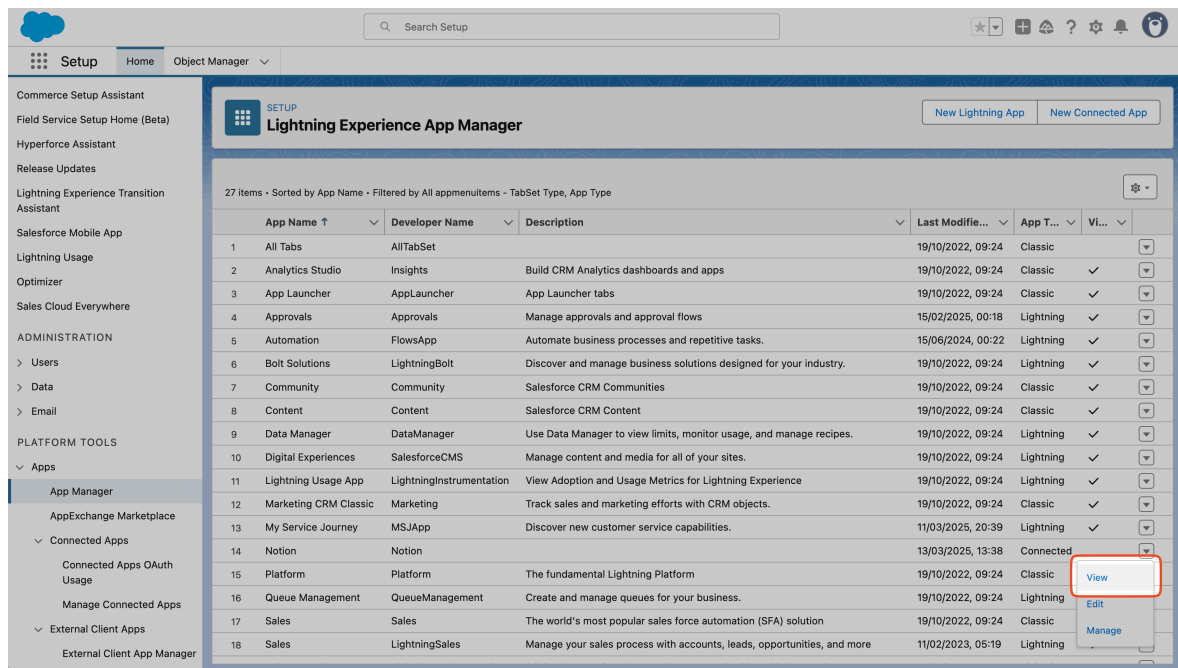

Then, in the modal dialog add:

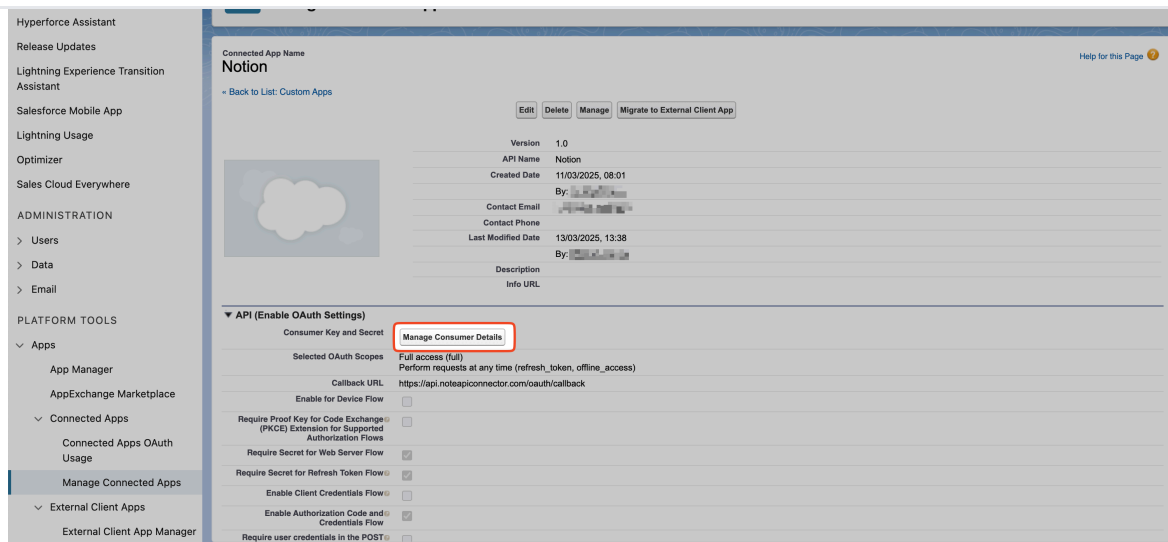

- Name, e.g. Salesforce Connection
- **Authorization Base URL** →
`https://login.salesforce.com/services/oauth2/authorize`
- **Token URL** → `https://login.salesforce.com/services/oauth2/token`
- **Scopes** → `full refresh_token`

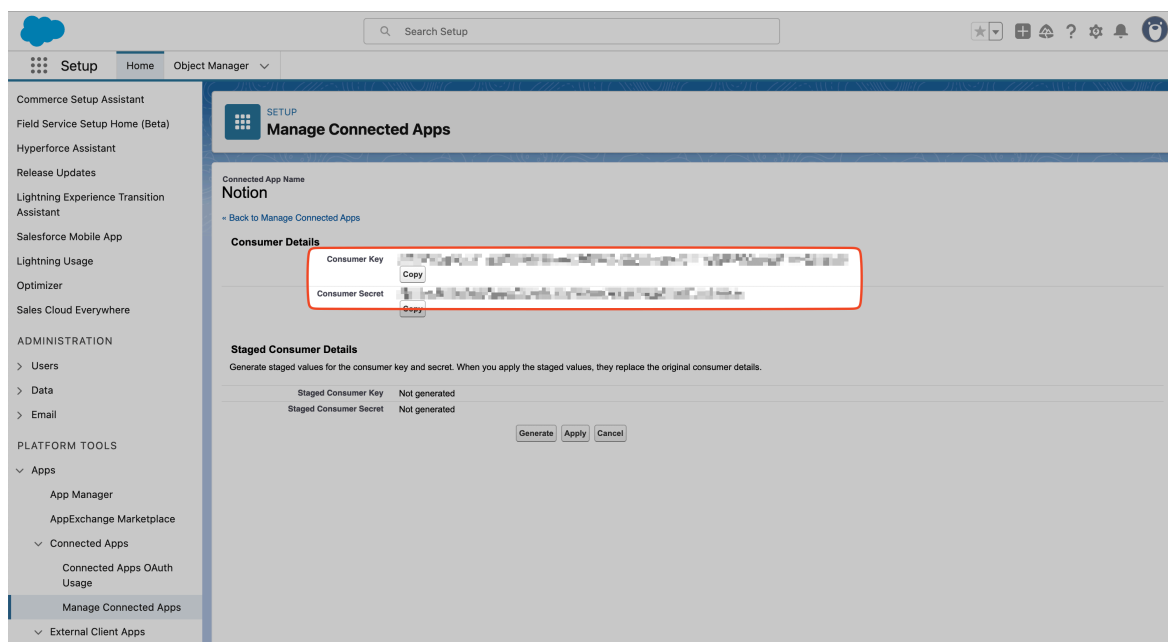

You need to go back to Salesforce to get **Client ID** and **Client Secret** parameters.

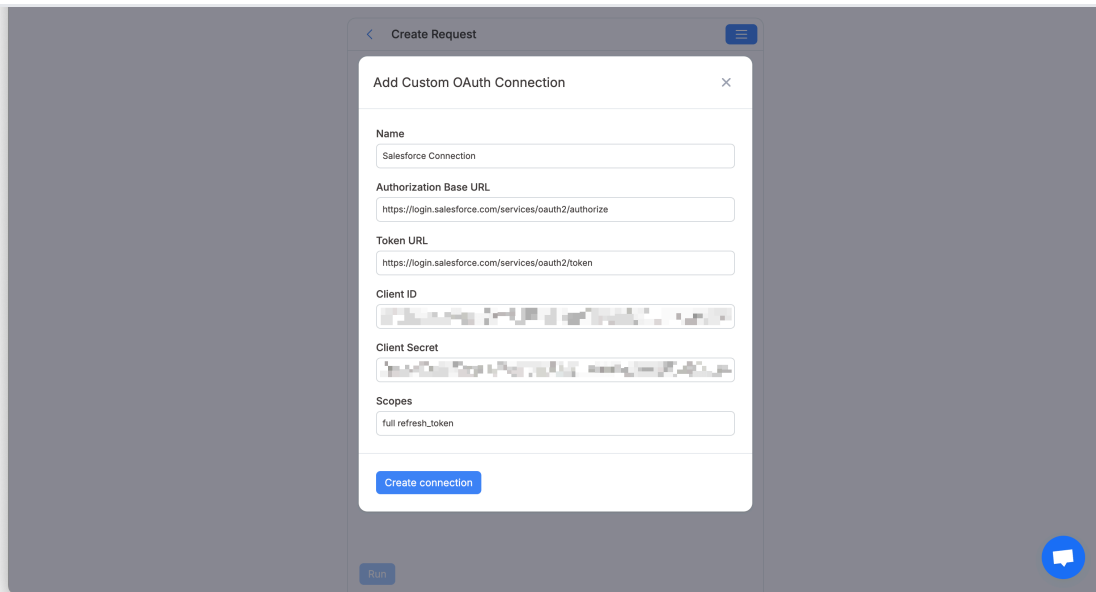

Enter **Manage Consumer Details** .

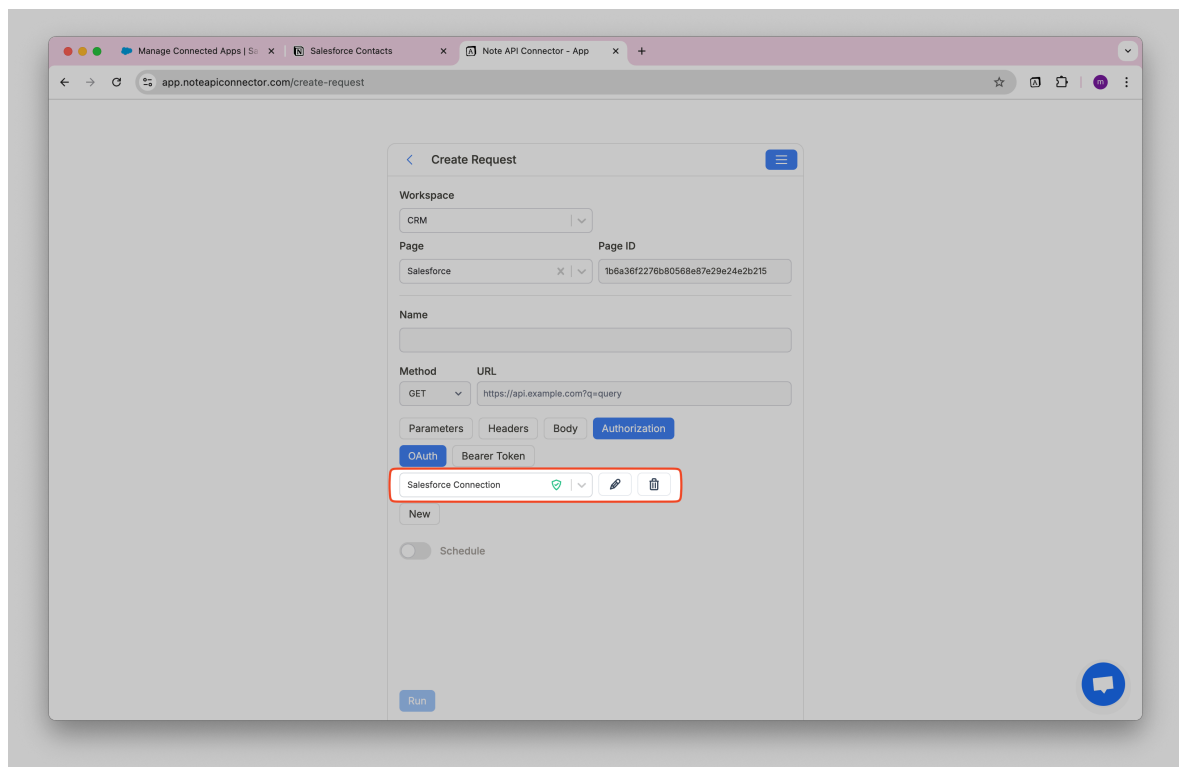

You can see **Consumer Key** and copy paste it to **Client ID** and **Consumer Secret** into **Consumer Secret** .

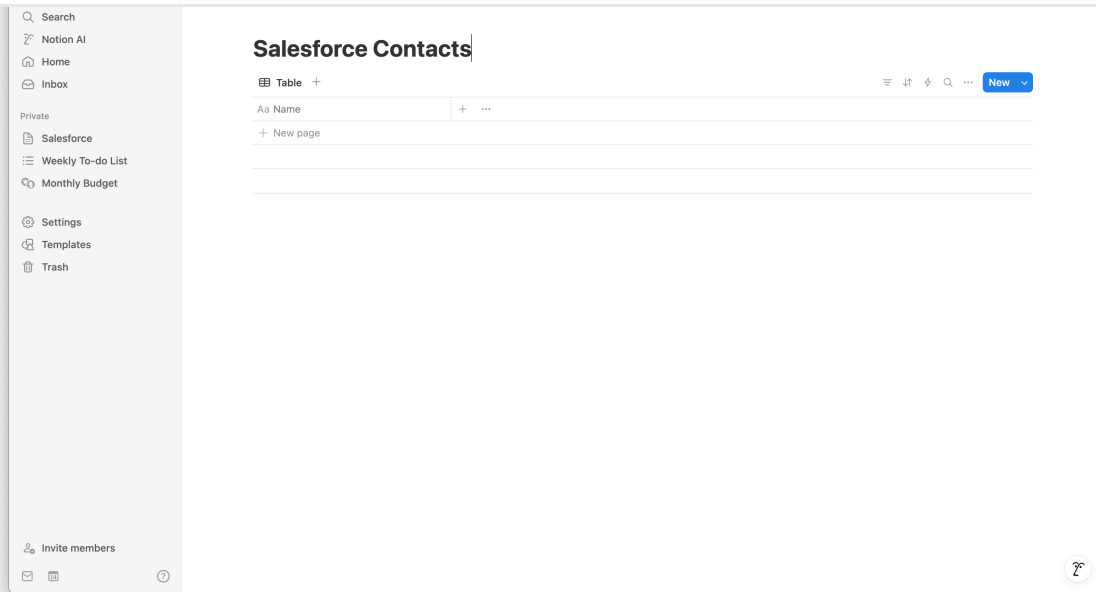

Then, you just need to confirm the connection between Salesforce and Note API Connector in a popup window. Then, you can see the success status for OAuth connection in Note API Connector.

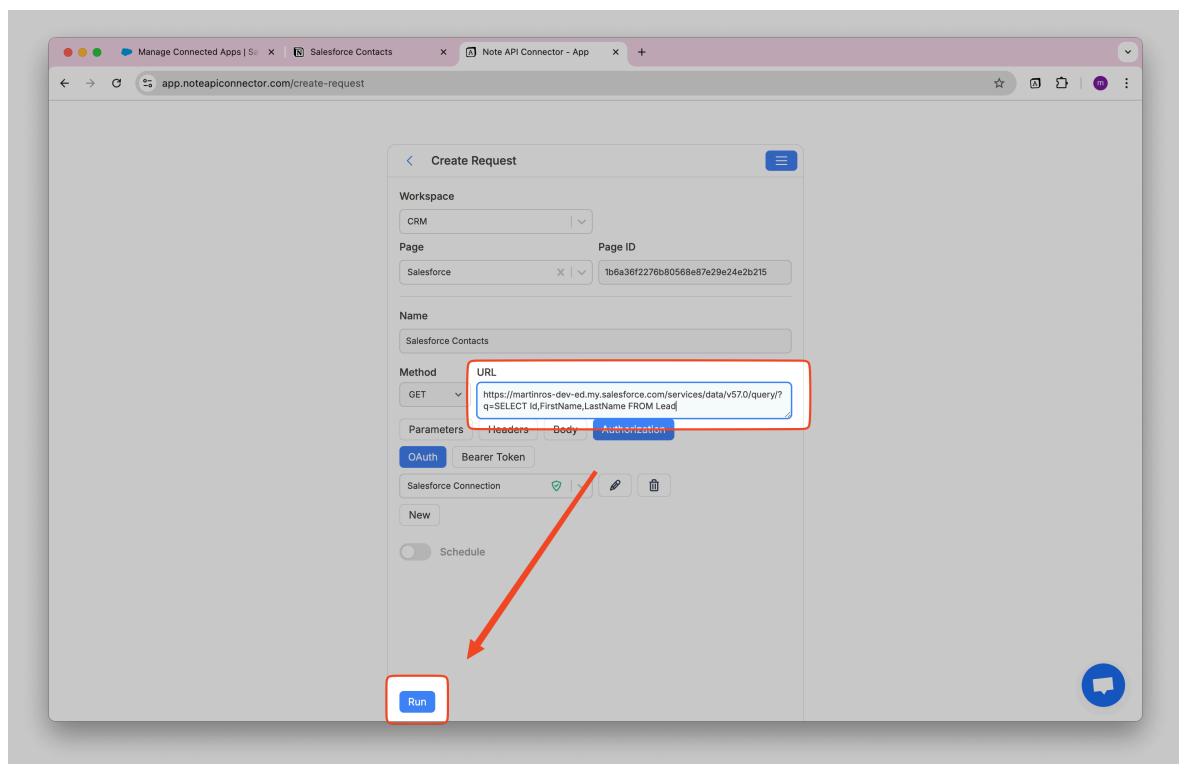

Create a Notion Database where Salesforce data will be imported.

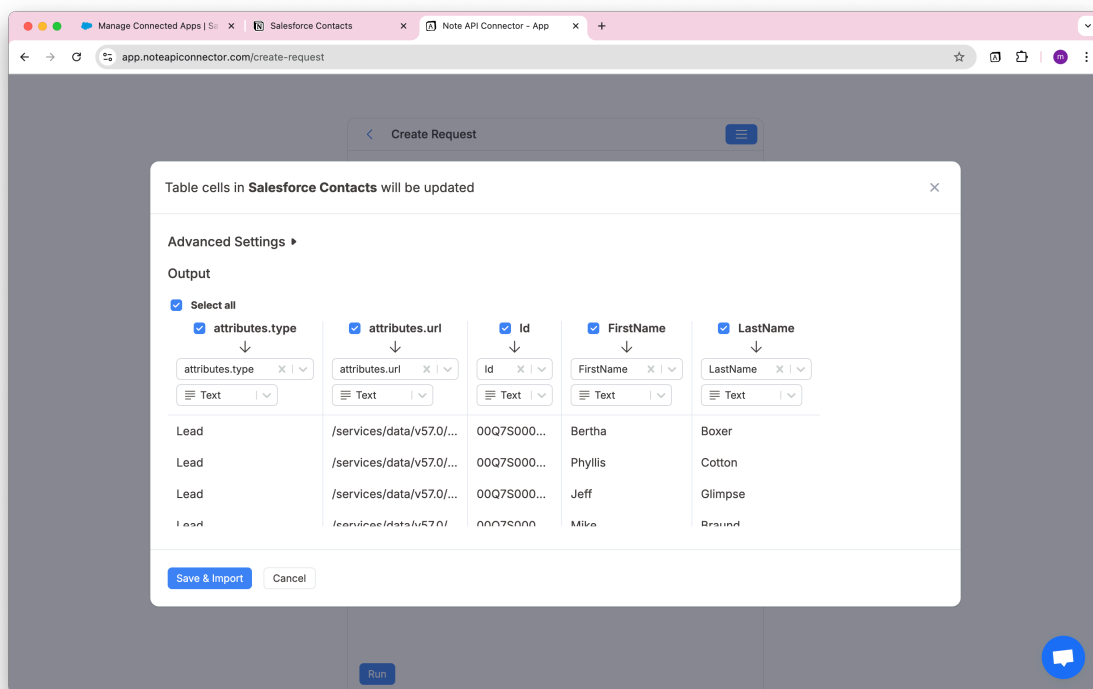

Name your request (e.g., **Salesforce Contacts**). Select the Notion database where you want to import the data.

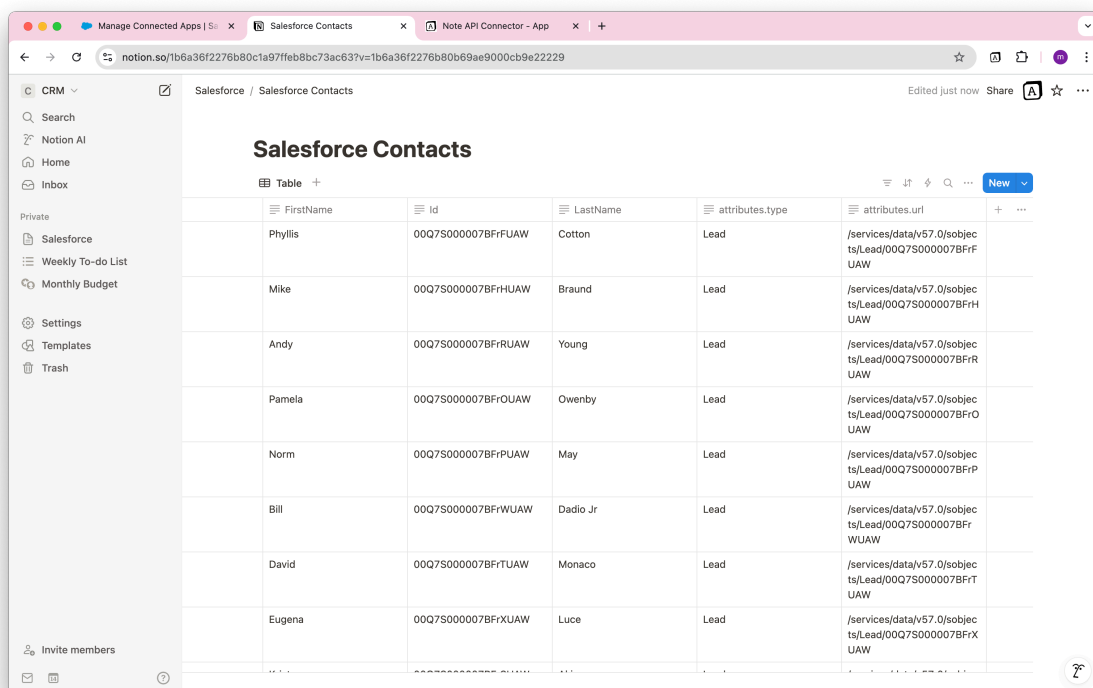

Add the url with SOQL query into **URL** field. Then, click **Run** to call API request.

```
https://martinros-dev-ed.my.salesforce.com/services/data/v57.0/query
```

Click **Save & Import** to store the data in your Notion database.

Automate Data Updates in Notion

Note API Connector's scheduling feature, you can **automate data updates**, ensuring your Notion dashboard always reflects the latest Salesforce information—without lifting a finger. Set it to refresh **hourly, daily, or at custom intervals**, so you never have to worry about outdated data again. Whether you're monitoring sales pipelines, tracking lead engagement, or analyzing customer relationships, automated synchronization lets you **focus on strategy while your data stays current**.

A screenshot of the Note API Connector interface showing the scheduling configuration. The 'Method' is set to 'GET' and the 'URL' is 'https://api.example.com'. Below these are tabs for 'Parameters', 'Headers', 'Body', and 'Authorization'. The 'Parameters' tab is active, and an 'Add' button is visible. A red-bordered box highlights the 'Schedule' section, which includes a toggle switch for 'Schedule' (turned on), an 'Interval' dropdown set to 'Days', 'Every' 2 'day(s)', and a time range 'Between 08:00 and 16:00 (GMT-4:00) Eastern Time'.

Conclusion

With **Note API Connector**, importing Salesforce data into Notion is seamless and efficient. This Notion Salesforce integration centralizes your valuable CRM information in one collaborative workspace, making it easier for teams to access and utilize customer data.

Whether you're tracking contacts, monitoring deals, or analyzing marketing performance, connecting Salesforce to Notion eliminates data silos and improves team productivity. The ability to create custom views, filters, and dashboards in Notion transforms your Salesforce data into actionable insights.

customer information.
